

How Tobii Devices (Mini Merc, Mercury, C8, C12, P10) can interact with the computer being used to run the SMARTBoard

1. Talk to your local IT person for access to software that allows a "remote session" (e.g., Go to My PC, SMART Sync, Webex, Netviewer etc).
2. The software needs to be installed on the teacher and on the student machine. With SMART Sync the Teacher would go on the Teacher computer and the Student Version would go on the Tobii Device. Some other programs may have different terminology (e.g., Administrator/Participant etc).
3. Once the software is installed on both computers you will be able to broadcast the student's screen and all other functions of the program but if you want the student to be able to send contents of the message window into another open application (e.g., Notebook, Boardmaker Activity etc) you will need to program the communication software (e.g., Tobii Communicator 4 software). Program message window to send button text (see manual of device for details or visit:
http://www.tobii.com/assistive_technology.aspx
4. You can also program a button to run the software chosen in (1) so the student can activate when needed. The other alternative is to have it open automatically on start-up.
